

Our Latest Exclusive Upgrade Product Descriptions

[EZ Oil Drain Valve Kit](#) – This exclusive kit makes changing the oil in your DeLorean a snap. No more worries about special drain plug tools or stripped threads in the oil pan. Draining the engine oil is as simple as lifting and turning a small lever to open, and then back again to close.

We worked with the manufacturer to develop an exclusive valve kit that fits that deep recess in the oil pan. This design is very secure, and will not leak or accidentally come open. Includes the EZ Oil Drain Valve, adapter fitting with seals, and instructions.

[LED Headlight Kit](#) - This exclusive LED headlight kit features premium quality housings with metal bodies and glass lenses that are certified to European Code (E-code) requirements. The LED light bulbs have a color temperature of 5000 degrees Kelvin, which is classified as “pure white”. They are in standard H4 and H1 formats, and are DOT certified. All components are made in Germany. The LED's are cooled by integrated high-performance fans, and feature a limited lifetime warranty for the bulbs, fans, and solid state drivers. This kit comes with detailed instructions, requiring only a minor pin change to the outer position light sockets to bring them up to the standard H4 configuration.

The original headlights in the DeLorean have been described as being “little better than a flickering candle in the wind”. With these LED headlights installed, nighttime driving will be significantly safer and much more enjoyable.

[Front Shock Tower Brace](#) - Our goal was to develop a brace that was more effective, added minimal weight, and allowed the trunk carpet to lay flat with minimal protrusion into the trunk volume. Road testing of this brace shows this installation to be very effective in reducing front end deflections when in hard corners and on uneven pavement. And in addition to allowing the carpet to lay flat, this design also allows the spare tire to be removed without removing the brace. In fact, the only time the brace will need to be removed is to replace the brake master cylinder. All other service is possible without disturbing this brace. For those who have been waiting for a less intrusive front shock tower brace, the wait is over!

[Third Brake Light System](#) - Virtually all new cars are equipped with a high-mount third brake light because these have been proven to significantly reduce the chances of a rear end collision. The very best of these third brake lights use high intensity LED's for commanding instant attention. Our Wings-A-Light high mount third brake light system features two low-profile housings that blend well with the DeLorean louver. Installs easily using double-sided foam tape, with no drilling or permanent modifications to the DeLorean. There is no obstruction of the rear-view mirror when installed in the recommended location. Complete kit with illustrated instructions.

K3002DP-x Wings-A-Light™ Third Brake Light System 74.95 + shipping

["One Touch" Window Controller](#) - This controller can be used to create modern "one touch" window operations manually and/or used remotely with our Wing-A-Loft™ systems. These modules operate by sensing current flow within the window motors, and discontinuing power to the motors when a certain amperage (current flow) value is detected. This means that the window motors automatically shut off when they reach the completely "up" or "down" positions. This dramatically reduces wear and damage to the window regulator drive mechanisms, and will extend the life of the window switches by eliminating the need to hold the switch in either position for the duration of window operation. Requires 1 per window.
