

Wings-A-Light™ Product Line Descriptions

[Third Brake Light System](#) - Virtually all new cars are equipped with a high-mount third brake light because these have been proven to significantly reduce the chances of a rear end collision. The very best of these third brake lights use high intensity LED's for commanding instant attention. Our Wings-A-Light high mount third brake light system features two low-profile housings that blend well with the DeLorean louver. Installs easily using double-sided foam tape, with no drilling or permanent modifications to the DeLorean. There is no obstruction of the rear-view mirror when installed in the recommended location. Complete kit with illustrated instructions.

[Headlight Switch Bypass Kit](#) - This easy-to-install kit reduces the electrical strain on the main headlight switch 108388 (Lights Master Switch, or LMS) by supplying power to the running lights and side markers through a heavy-duty relay, rather than through the LMS. Normally, the running lights and side markers draw about 4 amperes of power through the LMS. With this kit installed, the current draw is reduced to only the amount of the trigger current for the relay – about 70 milliamps (or 1/50th the amount of current!). This reduction in current flow through the switch prevents overheating and can extend the life of the LMS. This installation does not alter the operation of the running lights and headlights.

NOTE: This kit will not work with the DMC improved 108388N.

K3003DP Wings-A-Light™ Headlight Switch Bypass Kit \$9.95 + shipping

[LED Headlight Kit](#) - This exclusive LED headlight kit features premium quality housings with metal bodies and glass lenses that are certified to European Code (E-code) requirements. The LED light bulbs have a color temperature of 5000 degrees Kelvin, which is classified as "pure white". They are in standard H4 and H1 formats, and are DOT certified. All components are made in Germany. The LED's are cooled by integrated high-performance fans, and feature a limited lifetime warranty for the bulbs, fans, and solid state drivers. This kit comes with detailed instructions, requiring only a minor pin change to the outer position light sockets to bring them up to the standard H4 configuration.

The original headlights in the DeLorean have been described as being "little better than a flickering candle in the wind". With these LED headlights installed, nighttime driving will be significantly safer and much more enjoyable.

K3004DP Wings-A-Light™ LED Headlight Kit \$664.95 + shipping
